SUPER FAST TOOL FREE CHANGES BETWEEN DIFFERENT DIAMETERS AND TYPES OF HOLE SAW AND EASIER CORE EJECTION!

Ulti-Mate from Starrett offers super fast, tool free changes between different diameters and types of hole saw, without adjustment of the drill chuck. Removal of cores from a hole saw after a cut is also much improved by the rapid release of the hole saw from the arbor.

ATTACHING A HOLE SAW

LOCKING A HOLE SAW

RELEASING A HOLE SAW

REUSING THE ADAPTERS

USING THE ULTI-MATE!

ATTACHING A HOLE SAW

Screw the appropriate adapter on to the hole saw and push the hole saw and adapter down the drill (1). When the hole saw and adapter can be pushed no further, turn the hole saw and the collar will click on (2).

LOCKING A HOLE SAW

To lock a hole saw on to the ULTI-MATE, turn the collar on the arbor so that the arrow on the base of the arbor and the arrow on the collar are not aligned. (1). This will then lock the saw and the arbor together, and ensure that the hole saw cannot be accidentally released whilst drilling.

RELEASING A HOLE SAW

To release the hole saw, align the arrow on the collar and the arrow on the base of the arbor (1) and pull the collar back (2). The saw will then be released. The release is spring loaded so please take care when releasing the saw!

REUSING THE HOLE SAW ADAPTERS

Once the hole saw has come to the end of its useful life, the arbor adapters can be reused, even if intensive use has resulted in the adapters becoming very firmly attached to the hole saw. Place the complete assembly in a vice, using the flats on either side of the arbor to hold the assembly still (1). The used hole saw can then be unscrewed from the adapter using a pair of grips or similar tool.

- Attach the larger diameter hole saw to the Kwik-Change chuck.
- Attach the smaller diameter hole saw to the drill and slide it down inside the larger diameter saw.
- Drill the hole. **This system is recommended for overhead or vertical surfaces only.**

Attach the larger hole saw to the chuck, slide the smaller of the two hole saws inside the larger hole saw and use it as a pilot for the new, larger hole.

KWIK-CHANGE | CORE EJECTION

- If the core is stuck in the hole saw after drilling a hole, press the arbor button and slide the hole saw and attached arbor off the drill.
- The pilot drill can then be used to push the core out of the saw using the side flutes or the holes in the base of the saw.
- Caution: Cores may be hot and sharp.

If the core is still stuck in the saw, the pilot drill can be used to push the core out of the saw using the holes in the base of the hole saw.

CORE EJECTOR

A SIMPLE, BUT HIGHLY EFFECTIVE METHOD OF EJECTING THE CORE FROM A HOLE SAW AFTER COMPLETION OF THE CUT

- Select the appropriate size of ejector for the hole saw.
- Where it is necessary to assemble the two parts of the core ejector, twist the spring on to the ejector plate until it locks in place.
- Twist the spring on the assembled core ejector over the pilot drill until the pilot drill is protruding from the plate.
- Drill the hole.
- Please note that using the core ejector will reduce the cutting depth of the saw. The table below lists the recommended optimum maximum material thickness for each type of hole saw. The core ejector will function at greater material thicknesses than those listed, however its effectiveness will diminish.

- Assembled core ejector attached to a hole saw.

- After the hole has been drilled, the core can clearly be seen at the end of the pilot drill.

Core Ejector

Cat No	Description
KA8-1	Core Ejector suitable for 20 - 24mm hole saws
KA8-2	Core Ejector suitable for 25 - 38mm hole saws

KA8-5	Core Ejector suitable for 89 - 127mm hole saws
KA8-6	Core Ejector suitable for 133 - 210mm hole saws

Core Ejector Cutting Recommendations

Hole Saw Product Code	Recommended Maximum Material Thickness
FCH, DCH, CT	7mm
D and MPH	5mm

PLEASE NOTE

In some applications it is possible that the core may be ejected from the saw at high speed. Please always use safety goggles and glasses and take extra care if drilling vertically.
